

Laser 4® Wheel Alignment System

Laser 4® Toe Gauge (P/N 440-80001-00)

Smart Laser Digital Caster/Camber/SAI Gauge (P/N 440-80009-00)

Affordable high performance 4-wheel alignment system!

- ◆ The leading laser-based wheel alignment system
- ◆ Used in thousands of shops throughout the world!
- ◆ So accurate and reliable that it's used by major racecar teams!
- ◆ Digital caster/camber gauge with remote readout allows you to see changes as you make adjustments under the car!
- ◆ Precision laser instrumentation provides the most accurate toe measurements possible!
- ◆ A complete system for fast, accurate four wheel alignments.
- ◆ Laser beams for optimum precision.
- ◆ Easy to use. Measures camber, caster, SAI and toe.
- ◆ Affordable – low price, low maintenance, no expensive calibration or software updates.
- ◆ Free setup, training, and lifetime technical support.

Laser beams provide the highest level of accuracy available. They are so accurate that they are widely used today for precise surgical procedures and as aiming devices for military weapons. The Laser 4® Systems from RTI use laser beams to precisely set front and rear toe, producing a result with a perfectly centered steering wheel every time. It's easy and simple. In fact, the Laser 4® is probably the easiest to use and most accurate system in the world.

The advanced Laser 4® System uses an electronic device to measure Caster, Camber, SAI, and Included Angle. This device provides a very accurate, easy to read, digital readout, produced by space age electronic gravity sensors and very reliable discrete electronic components. It provides complete instrumentation needed to do fast and very accurate four wheel alignments. The optional Smart Laser Module allows you to record "before and after" measurements and print the results for your customer.

To utilize the full potential of the Laser 4®'s accuracy, we recommend that alignments be performed with front turntables and rear slip plates. Don't be fooled by cheap toy systems from manufacturers who claim that their "on floor" systems are a "good money-saving solution."

The new Laser 4® Truck Package is identical to the standard Laser 4® Toe Package for automobiles and light trucks, except for a few items. The Truck package includes four 14"-26" wheel clamps (in place of the standard 12"-17.5" clamps). A front extension kit allows the toe gauges to mount forward and shoot laser beams in front of larger front wheels. A lateral extension kit handles the challenge of "dually" wheels. These unique truck alignment items can also be purchased as a kit to add onto the standard Laser 4® for shops wanting to align both cars and trucks.

You don't need to be doing ten or more alignments per week to justify an alignment equipment investment. With the Laser 4® Systems, you get a high return on your investment with just a few alignments per week. In fact, it is a low cost instrumentation package with the same accuracy and speed as other systems costing two to three times as much! Get into the alignment business today with the Laser 4®!

Warranty: 12 months parts and labor, backed up by the factory.

See page 27 and 28 for wheel alignment products and accessories.

Front wheel alignment – Yes!
Thrust angle alignment – Yes!
Four wheel alignment – Yes!

Laser 4® Toe Instrumentation Package	P/N 440-80001-00
Smart Laser Digital Caster/Camber Gauge	P/N 440-80009-00
Laser 4® Truck Instrumentation Package	P/N 440-80013-00

Optional 15" Alignment Stand Kit (for shops without a 4 post lift)	P/N 610103
Optional 28" Alignment Stand Kit (for shops without a 4 post lift)	P/N 610105

Combine Laser 4® Toe Package (P/N 440-80001-00) with either Digital (P/N 440-80009-00) or Traditional (P/N 440-80002-00) Caster/Camber SAI Gauge.
